

What We Need From You

This is a plain checklist of the access, accounts, and decisions we need from your side to connect QRUIT to your existing email, file storage, and screening tools. Nothing here requires sharing passwords with us — every login happens directly on Google's or Microsoft's own site.

1. Email & file access — Google (if you use Gmail / Google Drive)

- Access to your company's Google Workspace admin console, or someone on your team who has admin rights, to register QRUIT as an approved application.
- Confirmation of which mailbox QRUIT should connect to. We recommend a dedicated mailbox such as recruiting@yourcompany.com rather than a personal one.
- The Google Drive folder(s) where job descriptions and CVs are kept, shared with that mailbox account.

2. Email & file access — Microsoft (if you use Outlook / SharePoint / OneDrive)

- Access to your company's Microsoft 365 admin (Entra / Azure) console, or someone who can grant “admin consent” for a new application.
- The same mailbox decision as above — a dedicated mailbox is recommended.
- The SharePoint site name/URL and folder path where CVs and JDs live, if SharePoint is in use.

3. WhatsApp Business (Meta Cloud API)

- A verified Meta Business Manager account and completed business verification for your company (legal documents required by Meta — this can take a few days, worth starting early).
- A dedicated phone number to register as your WhatsApp Business number, not currently used in the regular consumer or Business WhatsApp app.
- Sign-off on the wording for the WhatsApp message templates (interview invite, reminder, status update) — Meta requires these to be pre-approved before they can be sent.

4. Requit.ai (screening & interview engine)

- An API access token issued by Requit.ai. This comes from them directly, not from you — noted here only as a dependency we're tracking.

5. A stable web address

- A domain or subdomain (e.g. qruit.yourcompany.com) with HTTPS, so candidates can open interview links, our screening partner can retrieve files securely, and WhatsApp messages can be received.
- If you don't already have one to spare, we can set this up on our end — just let us know.

6. Basic role information (ongoing, per hiring role — not needed upfront)

- The email address of the person who should receive approval requests and updates for each role (the “client contact”).
- How many hours we should wait before sending a reminder if that person hasn't replied to a pending approval.

7. Two decisions from you

- Should we set up a new, dedicated recruiting mailbox for QRUIT, or connect an existing one? A dedicated mailbox is strongly recommended — it keeps things clean and unaffected if someone leaves the team.
- Should candidate messages prefer WhatsApp when both an email and a phone number are available, or only use WhatsApp as a fallback?

What we do NOT need from you

No passwords, ever. Login happens directly on Google's or Microsoft's own sign-in page, one time, and we never see or store any password.

No frontend, app, or dashboard credentials — this phase connects the backend only.
